Attendance is important

Arrive on time

Course Grading

- 30% Assignments, Attendance, Midterm
- 10% practical exam
- 10% oral exam.
- 50% final exam.

Course Objectives

Understand different AI problem-solving and search techniques.

Apply knowledge representation methods to model and solve AI problems.

Implement basic AI algorithms for reasoning, decision-making, and problem solving.

Analyze intelligent agents and their architectures in different environments.

Evaluate the performance, limitations, and applicability of different AI techniques.

Course Topics

- Introduction
- Problem solving agents
- Uninformed search techniques
- Informed search techniques
- Game playing
- planning
- Knowledge representation
- Inference in Propositional and First Order logic
